
In quest of challenging assignments in Software Development with a technology-driven organisation of repute.

Abridgment

- ✎ Around 2 years of IT industry experience as a **Full Stack Developer** focusing on **React.js**, JavaScript, Python, Django, REST API development, database design, and **frontend-backend integration**.
 - ✎ Having hands-on professional experience in **Python and Django backend development**, with strong exposure to **RESTful API design, database modelling**, and **application-level security**.
 - ✎ Experienced in building **scalable and high-performance backend systems** using **Django REST Framework, PostgreSQL**, and optimized query patterns for large-scale data processing.
 - ✎ Strong expertise in **backend optimization and performance tuning**, including efficient data handling, bulk operations, execution plan analysis, and query optimization techniques.
 - ✎ Hands-on experience in **database design, data migration, and maintenance**, ensuring data integrity, reliability, and high availability across environments.
 - ✎ Developed and maintained **automated backend jobs and scheduled processes** to support business workflows and system operations.
 - ✎ Worked extensively on **real-time projects** across **Education, Healthcare, and Support Management domains**, delivering secure, reliable, and production-ready solutions.
 - ✎ Actively involved in **production support**, debugging, and resolving customer-reported issues, ensuring minimal downtime and system stability.
 - ✎ Strong exposure to **Agile/Scrum methodology**, collaborating with cross-functional teams throughout planning, development, testing, and release cycles.
 - ✎ Proven ability to **analyse business requirements and translate them into backend solutions**, working closely with stakeholders in client-facing roles.
 - ✎ Strong communication, problem-solving, and teamwork skills, with the ability to work independently or lead backend initiatives under tight deadline.
-

Carrier Counters

- ✎ From July 2024 to march 2026 with **PROLAX IT SOLUTIONS PRIVATE LIMITED** as an Associate Developer.
-

Technical Skills

- ✎ Operating System: Windows
 - ✎ Programming Languages: Python
 - ✎ Backend Frameworks: Django, Django REST Framework (DRF), Flask
 - ✎ Databases: PostgreSQL, MySQL
 - ✎ Web Technologies: HTML, CSS, JavaScript, React.js
 - ✎ Development Tools: Git, VS Code, Postman
 - ✎ Core Concepts: REST API Development, ORM, Authentication & Authorization, Middleware, SQL Queries
-

Organizational Experience

Projects:

Company:	PROLAX IT SOLUTIONS PRIVATE LIMITED
Project:	Novya.in – Online Education Platform
Domain:	Education.
Technologies:	Python, Django, Django REST Framework, PostgreSQL, SMTP, IMAP., React.js

Project Description:

Novya.in is an online education platform that provides digital courses, structured learning content, and student progress tracking. The system supports multiple user roles—students, instructors, and administrators—and integrates with a frontend application through secure and scalable RESTful APIs. The platform emphasises performance, data integrity, and secure access control in a production-oriented environment.

Roles and Responsibilities:

- ✎ Developed responsive user interfaces using React.js, JavaScript, HTML, and CSS for course management, user profiles, and learning workflows.
 - ✎ Designed and developed full-stack components using React.js, Python, Django, and Django REST Framework to support digital learning workflows and multi-role user management.
 - ✎ Built reusable React components and integrated them with RESTful APIs for seamless frontend-backend communication.
 - ✎ Developed and consumed REST API endpoints for course enrollment, content delivery, instructor management, and learner progress analytics.
 - ✎ Implemented role-based access control (RBAC) and JWT/session-based authentication for secure access across frontend and backend modules.
 - ✎ Integrated frontend forms with backend services and ensured efficient data flow between React applications and Django APIs.
 - ✎ Enhanced application performance through API optimization, ORM optimization techniques, and frontend rendering improvements.
 - ✎ Implemented pagination, filtering, search functionality, and dynamic UI updates to improve user experience and API response efficiency.
 - ✎ Developed robust validation mechanisms, serializers, exception handling, and frontend form validations to ensure data consistency and reliability.
 - ✎ Ensured application security by implementing authentication, authorization, permissions, validations, and secure API communication.
 - ✎ Collaborated closely with cross-functional teams during frontend-backend integration, testing, and deployment activities.
 - ✎ Implemented logging, debugging, monitoring, and troubleshooting mechanisms to improve maintainability and system stability.
 - ✎ Delivered production support by resolving frontend and backend issues, performance bottlenecks, and customer-reported defects.
 - ✎ Actively participated in Agile/Scrum ceremonies, sprint planning, code reviews, and continuous improvement initiatives.
 - ✎ Implemented client-driven enhancements by modifying React components, backend objects, APIs, and business workflows based on evolving requirements.
 - ✎ Worked with PostgreSQL databases, ORM models, stored procedures, functions, and business validation logic to support application requirements.
 - ✎ Used Git for version control and collaborated with team members to manage code changes and releases effectively.
-

Projects:

Company : PROLAX IT SOLUTIONS PRIVATE LIMITED
Project : HRMS – Human Resource Management System
Domain : Human Resources
Technologies : React.js, JavaScript, Python, Django, Django REST Framework, PostgreSQL, Git

Project Description:

HRMS is a Human Resource Management System designed to manage employee information, departments, attendance, leave management, and other HR-related operations through a centralized web application. The application focuses on secure and scalable frontend-backend integration using React and Django REST Framework to ensure efficient employee management, rolebased access control, and reliable database operations. The backend system supports REST API-driven workflows, authentication mechanisms, and seamless integration with the frontend application. The project follows Agile methodologies to improve application performance, security, and maintainability.

Roles and Responsibilities:

- ✎ Gathered and analysed business requirements and converted them into scalable frontend and backend solutions.
- ✎ Developed responsive frontend user interfaces using **React.js and JavaScript**.
- ✎ Built RESTful backend services using **Python, Django, and Django REST Framework** for employee management, attendance tracking, leave management, and department operations.
- ✎ Integrated React frontend components with backend REST APIs for seamless data flow and user interactions.
- ✎ Designed and maintained **PostgreSQL database** schemas for employees, departments, attendance, and leave management modules with optimized query performance.
- ✎ Implemented **authentication and authorization mechanisms for secure user access** and role-based permissions.
- ✎ Developed CRUD operations for employee records, attendance, departments, and leave requests.
- ✎ Improved backend performance through query optimization, validation handling, and API security implementation.
- ✎ Implemented exception handling, debugging, and logging mechanisms for better application reliability and maintainability.
- ✎ Worked closely with team members during frontend-backend integration and testing activities.
- ✎ Provided production support by troubleshooting bugs, analysing root causes, and resolving application issues.
- ✎ Participated in **Agile/Scrum activities** including sprint planning, daily stand-up meetings, and development discussions.
- ✎ Prepared technical documentation, unit test cases, and deployment-related documents to ensure application quality and maintainability.
- ✎ Used Git for version control and code management during development activities.

Education Qualification

-
- ✎ **Bachelor of Technology (C.S.E)** – Sree Dattha Group Of Institutions(JNTUH) -2024
